

Stratus Marine Fuel Treatment

Suitable for application to all marine fuels.

Recommended dosage:

1 part STRATUS MARINE to 2,000 parts fuel.

Stratus Marine Fuel Treatment

KEY PRODUCT FEATURES

- Disperses water (condensation) from storage tanks
- Protects components from the detrimental effects of water droplets carried with the fuel
- Counteracts microbial growth (Diesel “bug”) by keeping tanks free of water
- Suitable for use in Diesel fuels with biofuel content: stabilises fuel, prolonging fuel’s shelflife and slowing degradation
- Cleans and protects fuel systems: prolongs component life
- Enhances fuel’s combustion process, creating a finer atomised spray and hotter, more complete “burn”
- Increases power output
- Reduces fuel consumption, typically by 5%
- Dosage recommendation: to achieve a complete “mix”, [STRATUS MARINE](#) should be applied to the fuel, just prior to next delivery of fuel being discharged into the tank
